Weekly Coal Production

Production for Week Ended: July 2, 1988

Summary

U.S. coal production in the week ended July 2, 1988, as estimated by the Energy Information Administration, totaled 15.6 million short tons. This was 13.5 percent lower than production in the previous week due to the beginning of miners' vacation on June 25, 1988. This week's production was 24.0 percent higher than in the corresponding week of 1987, which included

both the beginning of miners' vacation and the Independence Day holiday.

A common vacation period is observed primarily east of the Mississippi, where a signicant portion of the mines are affiliated with United Mine Workers of America (UMWA).
